Claims 1-11 are pending.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art disclosed in instant figure 5 of the application in view of Allison. The prior art as disclosed in instant figure 5 of the application discloses all the claimed features with the exception of having in the fuel cup 5a a nozzle seal sealing the inserted fuel nozzle 3a from atmosphere as well as a relief valve bypassing the mechanical seal about the nozzle 3a. The patent to Allison discloses, in figure 8 for example, that it is known in the art to employ a fuel filler neck 202 that includes a nozzle seal 212 mounted upon a support plate 210, which plate 210 includes mounted thereon a pressure relief valve 102 and a vacuum relief valve, not shown (column 8, lines 27-60), the seal 212 sealing the periphery of an inserted fuel nozzle "N" for the purpose of sealing the open end of the fill neck 202 and nozzle "N" thus precluding straight venting of fuel vapor to the atmosphere. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to employ in the fill cup 5a of instant figure 5 of the application a support plate having mounted thereon a seal element for supporting and sealing the fuel filler nozzle and a relief valve to relieve overpressure in the cup 5a for the purpose of sealing the open end of the fill neck 202 and nozzle "N" thus precluding straight venting of fuel vapor to the atmosphere as recognized by Allison. Also included in Allison is a downstream valve element 82 operable by nozzle insertion. The remaining limitations are considered to be clear from instant figure 5 of the application.

Art Unit: 3753

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
